

# CHAMELEON DUAL PTT BODY MICROPHONE

In critical situations it is imperative that the push-to-talk function (PTT) is easy to get to and works every time. To combat transmission anxiety, we developed the Chameleon Dual PTT Body Microphone. Slightly larger than the typical lapel microphone but still compact enough to work around all the body worn accessories, the Chameleon easily adapts to anywhere you place it. With PTT buttons on either side of the microphone you are rest assured your transmission will be received. Even with cold weather gloves it is easy to press.

## FEATURES & BENEFITS:

### ▶ Robust & Durable Dual PTT

on both sides of the mic, making it easier to grip the microphone for clear transmissions. Optimal for wearing gloves and tactical gear.

- ▶ The butterfly switch leads the audio signal path to external devices like a boom or throat microphone. Now, when you activate the PTT button the external devices are active.
- ▶ Chameleon microphone can be used as the primary stand alone mic with earpiece or in conjunction with an additional EPC boom microphone.
- ▶ Equipped with a 2.5mm audio jack with your choice of removable acoustic tube or tubeless earpiece.
- ▶ Volume On/Off Switch.
- ▶ Optional Finger PTT jack.
- ▶ With the Chameleons Easy Connect adapter, it will fit all radio makes and models.
